

Urgent Call: Request for UN Pilot Support & Hosting of Verified Green Technology – Rub-X

To the Innovation Teams at WIPO and UNDP,

I am writing once again on behalf of **Rub-X**, a field-proven green automation system for rubber tapping, to formally request **pilot support and institutional hosting** under your program's mandate.

For the past three years, our project has reached out to over 20 UN-affiliated and international institutions. Despite repeated acknowledgments, Rub-X has yet to receive the trial support needed to scale or be validated in the field.

Rub-X is not a prototype. It is a built and demonstrated system capable of automating the rubber tapping process in remote tropical areas — replacing hazardous, unsustainable manual labor with an ultra-low-cost mechanical system using minimal energy.

It aligns directly with:

- SDG 8 (Decent Work),
- SDG 12 (Sustainable Production), and
- SDG 13 (Climate Action).

We now make a public call for immediate institutional action, and we invite your agency to consider one or more of the following roles:

1. **Technical and brand hosting** under your green technology framework;
2. **Support for field pilot sites** in Asia, Africa, or Latin America;
3. **Public response and institutional engagement**, not just acknowledgment.

 Read our Open Letter to the UN and Partners:

 Download the full proposal PDF:
<https://www.rub-x.org/files/rubx-proposal.pdf>

Rub-X is currently one of the few proven automation solutions for climate-vulnerable rubber regions. We ask:

Can your institution help ensure this solution is not lost to silence?

Please feel free to reach out with any questions or to suggest collaboration pathways. We are fully open to trial partnerships, licensing under global frameworks, or third-party verification.

Thank you for your attention and your leadership on behalf of sustainable innovation.

Warm regards,

Hanmin Hu
