

Rub-X Institutional Hosting & Neutrality Declaration

To the United Nations and Partner Institutions:

I write on behalf of the Rub-X Project to formally request **institutional hosting and pilot support** under your mandate for sustainable innovation.

Rub-X is not a concept. It is a **proven, field-ready system** that automates rubber tapping in remote plantations — replacing hazardous manual labor with a low-cost, terrain-adaptive, energy-efficient solution.

It directly supports:

- **SDG 8:** Decent Work
- **SDG 12:** Responsible Production
- **SDG 13:** Climate Action

 [Watch demo](#) |  [Read proposal](#)

Despite contacting **over 20 UN-affiliated bodies**, Rub-X has received **no practical support**. This silence risks suppressing a viable green innovation urgently needed in Asia, Africa, and Latin America.

We now formally request:

1. **Technical & brand hosting** under a neutral framework
2. **Pilot deployment** in vulnerable regions

3. Public institutional response

Neutrality Statement

Rub-X is **independently developed** by inventor **Hanmin Hu** (PCT/US2017/047543). All patents are personally or privately held.

We are **not backed** by any government, military, or state entity — nor have we received any public funding.

We call for fair evaluation **based on technical merit**, not politics or nationality.

If institutions remain inactive, Rub-X reserves the right to **seal the system**, while retaining all IP claims.

Any unauthorized use — especially by previously contacted entities — will be considered a breach of ethical and legal norms.

Silencing a solution does not remove the need it addresses — only prolongs the harm.

Rub-X asks not for privilege, but for responsibility.

Can your institution rise to meet it?

Hanmin Hu
